Clinical Narrative

The patient, a 64-year-old female with a history of Type 2 Diabetes, presents with a mild headache persisting for two days. Her recent laboratory results indicate elevated glucose levels at 250 mg/dL and an HbA1c of 8.5%, suggesting suboptimal diabetes control. There are no reported allergies or adherence issues. The triage priority is non-urgent, and no red flags were identified.

Differential Diagnoses

Rank	Diagnosis	ICD10	Probability
1	Tension-type headache	G44.2	MODERATE
2	Hyperglycemia-related headache	E11.65	LOW-MODERATE
3	Hypertension-related headache	I10	LOW

Information Gaps

- Current blood pressure readings
- Detailed headache characteristics (e.g., location, quality, associated symptoms)
- Recent changes in medication or lifestyle

Recommended Next Steps

- Obtain current blood pressure measurement
- Assess headache characteristics in more detail
- Review diabetes management plan and consider adjustments
