Overall Risk	CRITICAL
Physician Alert	True
Synthesis Confidence	0.9

Clinical Narrative

The patient, a 61-year-old male, presents with severe chest pain radiating to the left arm, accompanied by shortness of breath, sweating, and nausea. These symptoms raise concern for an acute coronary syndrome, particularly given the emergent triage priority and the presence of multiple red flags. The patient's EHR does not list any prior diagnoses or medications, which limits historical context. An RPM alert indicates a high heart rate of 130 bpm, which is consistent with the current presentation.

Differential Diagnoses

Rank	Diagnosis	ICD10	Probability
1	Acute Coronary Syndrome	I20.0	VERY-HIGH
2	Pulmonary Embolism	I26.9	MODERATE

3	Aortic Dissection	I71.00	LOW-MODERATE
---	-------------------	--------	--------------

Information Gaps

- Detailed cardiac history
- Recent ECG or cardiac enzyme tests
- Vital signs including blood pressure and oxygen saturation

Recommended Next Steps

- Immediate ECG to assess for ischemic changes
- Cardiac enzyme tests to evaluate for myocardial infarction
- Continuous cardiac monitoring
- Consideration of imaging studies if aortic dissection is suspected
