Clinical Narrative

The patient, a 64-year-old female with a history of Type 2 Diabetes, presents with a high fever of 39.2°C, a productive cough, chest discomfort, and fatigue persisting for three days. The triage system has flagged these symptoms as urgent, raising concerns for a possible respiratory infection. The patient's recent lab results indicate elevated glucose levels and an HbA1c of 8.5%, suggesting suboptimal diabetes control. No medication allergies are reported.

Differential Diagnoses

Rank	Diagnosis	ICD10	Probability
1	Community-acquired pneumonia	J18.9	HIGH
2	Acute bronchitis	J20.9	MODERATE

3	Exacerbation of chronic obstructive pulmonary disease (COPD)	J44.1	LOW-MODERATE
---	--	-------	--------------

Information Gaps

- Chest X-ray or CT scan to assess lung involvement
- Complete blood count to evaluate for infection
- Sputum culture to identify causative organism

Recommended Next Steps

- Order chest imaging to evaluate for pneumonia
- Perform a complete blood count and sputum culture
- Review and adjust diabetes management as needed
