Clinical Narrative

The patient, Sarah Johnson, a 64-year-old female with a history of Type 2 Diabetes, presents with a burning sensation while urinating and increased urinary frequency for two days. Her recent lab results indicate elevated glucose levels (250 mg/dL) and an HbA1c of 8.5%, suggesting suboptimal diabetes control. The triage system has flagged urinary symptoms as a red flag, raising concern for a possible urinary tract infection (UTI).

Differential Diagnoses

Rank	Diagnosis	ICD10	Probability
1	Urinary Tract Infection	N39.0	HIGH
2	Diabetic Cystopathy	N31.9	MODERATE
3	Vaginitis	N76.0	LOW-MODERATE

Information Gaps

- Urinalysis results
- Physical examination findings
- Presence of fever or systemic symptoms

Recommended Next Steps

- Perform urinalysis to check for infection
- Consider urine culture if urinalysis suggests infection
- Evaluate blood glucose control and adjust diabetes management as needed
- Conduct a physical examination focusing on the genitourinary system
