Clinical Narrative

The patient, a 64-year-old female with a history of Type 2 Diabetes, presents with a mild headache persisting for two days. There are no accompanying symptoms such as fever, vision changes, or other concerning signs. The patient's recent lab results indicate elevated glucose levels and an HbA1c of 8.5%, suggesting suboptimal diabetes control. No red flags or urgent concerns were identified in the triage process, and the case is categorized as non-urgent.

Differential Diagnoses

Rank	Diagnosis	ICD10	Probability
1	Tension-type headache	G44.2	HIGH
2	Hyperglycemia-related headache	E11.65	LOW-MODERATE

3	Migraine without aura	G43.0	LOW
---	-----------------------	-------	-----

Information Gaps

- Detailed headache characteristics (e.g., location, quality)
- Presence of any triggers or relieving factors
- Complete neurological examination findings

Recommended Next Steps

- Conduct a detailed headache history to assess characteristics and potential triggers
- Evaluate blood pressure to rule out hypertension-related headache
- Consider glucose monitoring to assess for fluctuations contributing to symptoms
