Clinical Narrative

The patient, a 61-year-old male, has expressed thoughts of self-harm and does not feel safe being alone. This presentation raises significant concern for a mental health crisis, particularly given the emergent priority assigned by the triage system. No specific medical history or medications are noted in the EHR for this patient, but the context suggests a critical need for immediate intervention to ensure safety.

Differential Diagnoses

Rank	Diagnosis	ICD10	Probability
1	Suicidal Ideation	R45.851	VERY-HIGH
2	Major Depressive Disorder	F32.9	HIGH
3	Adjustment Disorder with Depressed Mood	F43.21	MODERATE

Information Gaps

- Detailed psychiatric history
- Current mental status examination
- Social support and living situation details

Recommended Next Steps

- Immediate psychiatric evaluation to assess risk and safety.
- Consider hospitalization for safety if risk of self-harm is confirmed.
- Initiate crisis intervention and support services.
